

I take notes on the April 11 2016

- ① what is the origin of *R. terminalis* - I think there are the first identified as terminalis
 - ② CNFV Q1512 *R. leucodonta* Quebec and Ontario - are they *T. rufus*?
 - ③ MOBIL ~~1215~~ 1215-16 - possibly they are 2 "D" galls on *Salix purpurea* (large D, small D)
 - ④ GBPD 3703 *Strobilium*?
 - ⑤ are all the *ringulidae* mesoctic?
 - ⑥ are all the *subcincta* *solivora* *palustris*? } if they are, we are good for both species.
 - ⑦ according to the photograph, it is a "B" gall on *S. purpurea*!
- It should be far from the other (April 11)
