Dear Robert,

Thank you very much for your offer to examine our specimens. That is excellent news about the succineids. It would be great to obtain some species records for our mollusk populations. I am currently interning from the UK and so am unfamiliar with gastropods of North America. However, with the use of your book and several web references I feel fairly confident in my determinations.

I have identified nine separate species: *Succinea ovalis*, *Vertigo Cristata*, *Vertigo modesta*, *Columella columella*, *Columella edentula*, *Zoogenetes harpa*, *Euconulus fulvus*, *Discus whitneyi* and *Lymnaea auricularia*, all of which are included in the package. Also enclosed are four families I was unable to take any further: Vertiginidae, Valloniidae, Strobilopsidae, Succineidae and a freshwater bivalve. I have included a list of the specimens sent to you on the next page.

The specimens were collected within the Kenai National Wildlife Refuge (KNWR) and are part of our Long Term Ecological Monitoring Project (LTEMP), which is designed to catalogue diverse taxa on a grid of ~300 points distributed at 4.8km intervals over the entire 800,000ha refuge.

If you would like detailed habitat information for all of the Kenai National Wildlife Refuge please do not hesitate to ask and we will be more than happy to send it to you.

Thank you again for taking the time to look at our material,

Sincerely

Charlotte Hockin
